INTERPRETATION

A Female skeleton laid out dorsally in an E-W orientation. Feet appear to partially extend beyond cappuccina covering. State of preservation is not excellent, perhaps due to lead sheet so 1377 upon which the skeleton sits.

The bones stuck partially in a thin layer of soil which seemed to have contained a fair amount of mortar. After the removal of the skeleton the imprints of the femora and the skull were visible. Beneath the skull and adjacent to the feet were bigger humps of mortar.

Age group for the skeleton 35-40 years, rib fractures
