OBSERVATIONS Vessel is still in situ, in the backfill of previous Italian excavation						
DESCRIPTION Position within sector: located near the southern extent of Area B, positioned to the west of center, positioned directly south of SU 1424 Shape: cylindrical in shape, bottom portion of the vessel still submerged. Exterior walls are nearly vertical, while interior walls slope inwards

Description:

rounded vessel interred in the ground with an interior space that decreases as it goes down in depth

INTERPRETATION

vessel 1429 might have served as a storage vessel for liquids or other goods, the interior of the vessel comes to a bottom in a similar fashion as amphorae do. The vessel is slightly tilted to the north, indicating how it was placed in, indicating it most likely isn't carved from bedrock.

vessel 1429 has bright pink dots indicating previous topographical documentation
vessel 1429 was found under geotextile from previous excavation
