OBSERVATIONS partially excavated sondage (22-7)						
DESCRIPTION Position within sector: junction between ashlar wall (2032) and N-S wall (2033) Shape: not significant because of excavation limit						
For layers complete this section:						
Surface (slope direction; visible inclusions): <del>level</del> irregular, undulating, small fractions of tufo						
Observations about inclusions (Clusters? Deposition slope): pottery was in the lower part of layer						
Observations about thickness (Increases? Decreases?): increases as you proceed south towards ashlar						
Nature of the interface with layer below: <input checked="" type="checkbox"/> sharp <input type="checkbox"/> diffuse <input type="checkbox"/> commingled <input type="checkbox"/> other (specify)

**INTERPRETATION**

SU appears to be connected with the sequence of leveling layers; the surface was more compact than previous layers indicating a possible walking space in relation to the building ~~to~~ of the walls around it; the elevation is in fact at level with the cement floor south of SU 2032
