OBSERVATIONS

DESCRIPTION

Position within sector: Southeast part of Area C

Shape: Roughly rectangular

For layers complete this section:

Surface (slope direction; visible inclusions):

Observations about inclusions (Clusters? Deposition slope):

Observations about thickness (Increases? Decreases?):

Nature of the interface with layer below: sharp diffuse commingled other (specify)

For cuts complete this section:

Cut edges: rounded straight

Cut sides: straight concave convex sloping

Cut bottom: flat concave irregular

How is cut top edge? sharp rounded

How is cut bottom edge? sharp rounded

Observations: Some parts have wall preserved well above floor level, but many parts have also been robbed out and are lower than the floor. Very irregular

INTERPRETATION

This is the cut which robbed out the basalt wall 2240. Small sections of the wall were left behind, but large sections were irregularly taken out. The western half appears to be more intact than further east. There is also a Northern floor limit there, whereas to the east the Northern limit is unclear. Large amounts of roof tile are also there, but it is unclear whether they were left behind during the cut, or added in the later fill.
