INTERPRETATION

Eastern limits of floor (SU 2202, SU 2253) are truncated but a specific cut has not been identified or assigned, SU 2305 appears to be a natural, post abandonment accumulation layer. Yellow soil patches and vertically deposited rocks are visible on W edge of layer. These appear to continue below the floor (SU 2202, 2253) and may be Archeic. For this reason, SU 2305 ends at the depth of these patches.
