OBSERVATIONS

DESCRIPTION

Position within sector: *North of wall, SU 2292, south of drainage channel fill, SU 2207*

Shape: *Roughly triangular, with limits defined by SU 2206 to the north, excavation limit to the east, and SU 2292 to the south.*

For layers complete this section:

Surface (slope direction: visible inclusions): *No strong slope, a few pieces of tufo & basalt visible along with the larger blocks.*

Observations about inclusions (Clusters? Deposition slope): *The small basalt pieces seem to cluster nearby the large stones; this could be fragmentation or the remains of a construction.*

Observations about thickness (Increases? Decreases?):

Nature of the interface with layer below: sharp diffuse commingled other (specify)

For cuts complete this section:

Cut edges: rounded straight

Cut sides: straight concave convex sloping

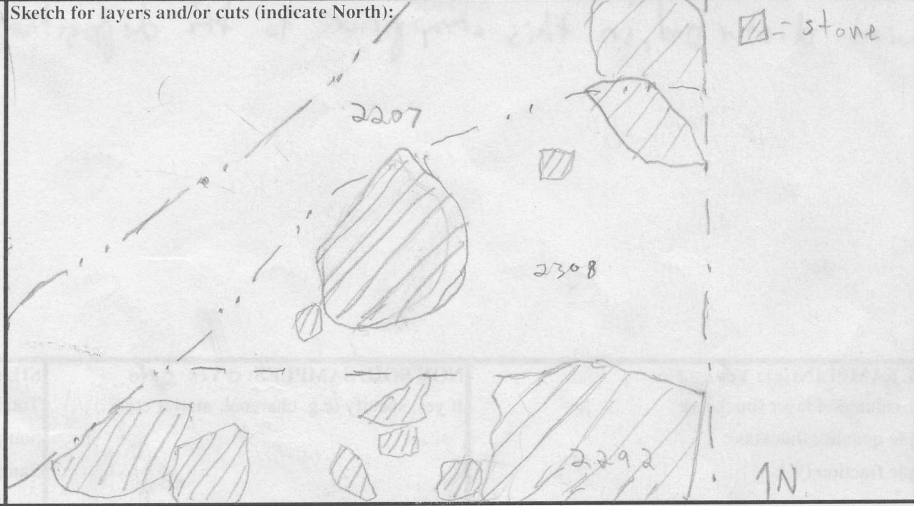

Cut bottom: flat concave irregular

How is cut top edge? sharp rounded

How is cut bottom edge? sharp rounded

INTERPRETATION

post abandonment layer of soil. This layer covered several substantially large rocks. These rocks seem to have been part of a wall (2290, 2291, 2292) which was disturbed, in this area, prior to the deposition of this layer.
