INTERPRETATION

^{THE AREA}
 This seems to be a layer of colluvial deposit but seems to have been heavily disturbed. The level is physically below 2214/wall but stratigraphically the wall doesn't correlate with the layer. The red layer to the N of the SW does not seem to continue under the SW. Originally thought we would find the red in 2370 but it stops. There was some rubble in the SW corner consisting of small rocks and tiles that has been removed.
