DESCRIPTION
Position within sector: near eastern wall, near the road
Shape: roughly circular

For layers complete this section:
Surface (slope direction; visible inclusions):
Observations about inclusions (Clusters? Deposition slope):
Observations about thickness (Increases? Decreases?):
Nature of the interface with layer below: sharp diffuse commingled other (specify)

For cuts complete this section:
Cut edges: rounded straight
Cut sides: straight concave convex sloping
Cut bottom: flat concave irregular
How is cut top edge? sharp rounded
How is cut bottom edge? sharp rounded
Observations:
the cut is very irregular. the soil in the fill is very soft & there is a lot of stone at bottom

For structural remains complete this section

INTERPRETATION

Natural subsidence since the fill had a low frequency of anthropic inclusion, the edges were poorly defined and the presence of a depression in the centre.
