DESCRIPTION Position within sector: in NE corner of Room 1; East of 3014 Shape: circular						
For layers complete this section: Surface (slope direction; visible inclusions): No visible slope. Inclusions of rocks and ceramics are scattered throughout with a higher concentration in the center. Notable concentrations of wall and base fragment lying flat on surface. Observations about inclusions (Clusters? Deposition slope): Some large stones throughout the layer. High concentration of pottery throughout layer. Observations about thickness (Increases? Decreases?): CONSISTENT, SLIGHTLY THICKER IN N.W. **INTERPRETATION**

Seems to be a layer of accumulated fill associated of post-abandonment phase of hut. The concentration of materials was much higher than most SUs found in entire area. High number of spots found here; this seems to be consistent of high concentration of spots found in layers immediately above this.
