**INTERPRETATION**

SU 333 is a silt layer containing the <sup>inhumation</sup> burial of a child (SU ) & associated grave goods. Ten largely complete vessels were recovered, & each was given its own SU (337-345, 347). Most were found to the south, & appear to have been placed at the child's feet, though two were found at the north edge. Initial examination suggests a date in the Latial 3 period (770-730 BCE). A bronze pendant discovered in the area of the skeleton, suggests that the child is female.
