DESCRIPTION
 Position within sector: Southwest corner of Area N of wall 5006
 Shape: Irregular
 Stratigraphic reliability: v. good in places & v. bad in others

For layers complete this section:
 Surface (slope direction, visible inclusions): larger rocky inclusions on western & eastern sides - slight downward slope towards south
 Observations about inclusions (Clusters? Deposition slope): large rocks on western & eastern sides
 Observations about thickness (Increases? Decreases?): decreases towards south
 Nature of the interface with layer below: sharp diffuse commingled other (specify) Bottom was hard to define in certain spots

depth = .85 m

Handwritten signature or initials in the bottom left corner.

INTERPRETATION

Southern edge was thought to be defined, but turned out to be a tip line. Actual southern edge is now an excavation limit, as is the western edge. Vertically-placed block (?) at bottom level on southern limit. Possible ancient fill post-abandonment of site. Northern edge was thought to be artificial, but really wasn't.
