OBSERVATIONS began excavation of SU whose N limit was 60m further S on July 16, but SU was extend N all the way to bedrock terrace on July 17 when we determined fill next to BR was the same as SU; pick axe and trowel used

DESCRIPTION  
Position within sector: S end of area F just S of bedrock edge  
Shape: Irregular, pseudo-trapezoidal

For layers complete this section:  
Surface (slope, direction, visible inclusions): very few tufo surface inclusions, no slope on surface  
Observations about inclusions (Clusters? Deposition slope): concentration of rubble and compacted soil at central S end; relatively large frags. animal bones  
Observations about thickness (increases? Decreases?): increased thickness in centre since W side sits on sloped SU below  
Nature of the interface with layer below:  sharp  diffuse  commingled  other (specify)
