INTERPRETATION

SO 5093 was filled w/ pottery, tiles and other materials including many special finds (see observations) and rubble especially along the western edge of the SO along wall SO 5018. Additionally, there was a patch, in the south-east, of burned material (mostly bone and charcoal) which was also in close proximity to a cluster of glass vessels and another cluster of special finds (see sketch). This appears to be the result of dumping activity perhaps of objects from the adjacent structure.
