OBSERVATIONS excavated on dry sunny day with pick axe and trowel						
DESCRIPTION						
Position within sector SW end of area F						
Shape rectangular						
For layers complete this section:						
Surface (slope direction, visible inclusions): slight slope N; large fragments of pottery and tile, tuff rubble						
Observations about inclusions (Clusters? Deposition slope): more and larger chunks of tuff rubble in central area as part of "lens"						
Observations about thickness (Increases? Decreases?): thicker in on NW side; more thinly deposited on long ends - "lens" shaped						
Nature of the interface with layer below: <input type="checkbox"/> sharp <input checked="" type="checkbox"/> diffuse <input type="checkbox"/> commingled <input type="checkbox"/> other (specify)						
For cuts complete this section:			Sketch for layers and/or cuts (indicate North):
