INTERPRETATION

This SU was originally excavated partially. The fill was identified due to its dark color after cleaning the surface and it was realized that the cut extend ca 10 more meters to the S. A new SU strat (this one) was started. This SU spans the drainage trench (2206) in the form of SU 2211. It also cuts the floors of 2202 and 2213. The channel function is still unknown but it is possibly modern. Material in the fill gave no indication of the cut function.
