OBSERVATIONS Exposed by pikaxe + bulldozer, circular cut found above ancient layers

DESCRIPTION
Position within sector: Southeastern, near the road
Shape: circular

For layers complete this section:
Surface (slope direction; visible inclusions):
Observations about inclusions (Clusters? Deposition slope):
Observations about thickness (Increases? Decreases?):
Nature of the interface with layer below: sharp diffuse commingled other (specify)

For cuts complete this section:
Cut edges: rounded straight
Cut sides: straight concave convex sloping
Cut bottom: flat concave irregular
How is cut top edge? sharp rounded
How is cut bottom edge? sharp rounded
Observations: Fill silty with tufo inclusions, especially concentrated at the interface with cut 3001. A large bone protrudes from the cut wall

For structural remains complete this section

INTERPRETATION

Modern cut discovered above the level of ancient remains by the bulldozer. Cut filled with soil and a layer of tufo stones especially concentrated at the interface between the fill and the cut. Possibly a wall which the cut cut.
